

ALA-1

❖ Python Error File

```
print("Matrix Addition Program")

rows = int(input("Enter rows: "))

cols = int(input("Enter columns: "))

i = 0

while i < rows:

    j = 0

    while j < cols:

        a = int(input("Enter value for Matrix A: "))

        b = int(input("Enter value for Matrix B: "))

        result = a + b

        print("Sum:", result)

        if result % 2 == 0

            print("Even value")

        else:

            print("Odd value")

        j = j + 1

    i = i + 1

    print("Matrix addition completed")

    if rows == cols:

        print("Square matrix")

    else:

        print("Rectangular matrix")
```

❖ ERORR & SOLUTION

1. ERORR (Missing Colon [:])

```
if result % 2 == 0
```

➤ SOLUTION

```
if result % 2 == 0:( Add Colon)
```

2. ERORR (Missing Closing Bracket [])]

```
Print ("Matrix addition completed"
```

➤ SOLUTION

```
Print ("Matrix addition completed") (Add Closing Bracket)
```

❖ Python Solution File

```
print("Matrix Addition Program")
rows = int(input("Enter rows: "))
cols = int(input("Enter columns: "))

i = 0
while i < rows:
    j = 0
    while j < cols:
        a = int(input("Enter value for Matrix A: "))
        b = int(input("Enter value for Matrix B: "))

        result = a + b
        print("Sum:", result)

        if result % 2 == 0:
            print("Even value")
        else:
            print("Odd value")

        j = j + 1 # increment column

    i = i + 1 # increment row

print("Matrix addition completed")

if rows == cols:
    print("Square matrix")
else:
    print("Rectangular matrix")
```

❖ Python Code Output Image

The screenshot displays a Python IDE with a project named 'ALA 1'. The file explorer on the left shows files: `errrr.py`, `main.py`, and `solution.py`. The editor window shows the code in `solution.py`:

```
16     print("Even value")
17     else:
18         print("Odd value")
19
20     j = j + 1 # increment column
21
22     i = i + 1 # increment row
23
24     print("Matrix addition completed")
25
26     if rows == cols:
27         print("Square matrix")
28     else:
29         print("Rectangular matrix")
30
```

The Run console at the bottom shows the execution output:

```
Run solution
"C:\Users\Admin\PycharmProjects\PythonProject\Python\Python\Python\Python\ALA 1\.venv\Scripts\python.exe" "C:\Users\Admin\PycharmProjects\PythonProject\Python\Python\Python\Py
Matrix Addition Program
Enter rows: 3
Enter columns: 2
Enter value for Matrix A: 23
Enter value for Matrix B: 32
Sum: 55
Odd value
```
